trough

zero crossing

free

original onset rule: walk back from steepest while descending

vs original start -4 s · end +2 s · duration +6 s

What saving writes

a new revision of this motif, not a replacement

rev 1	detection d-0412	run 128 · machine	kept	run 128 still reproduces from its recipe – the detection is untouched
rev 2	annotation a-2077	this edit · human	current	later runs that find the original extent resolve to this same motif
				your geometry goes to the annotation store, never the detection table
