estimates calibrated 12 Sep 2026

local jobs at once

2

Local limits per workspace

above a limit the work goes to the cluster

workspace	what is estimated	run locally up to	above the limit
Analyse	one stage on one channel	20 min	the stage offers Create SLURM script · downstream stages wait
Discovery	one run across its channels	20 min	Add and run disabled · Create SLURM script is primary
Models	one training job · all arms and nulls	2 h	Train locally disabled · Create SLURM script is primary
Library	one grouping computation	10 min	runs in the background with progress
Review	building a queue	5 min	runs in the background with progress

Clusters

+ Add cluster

name	login host	scheduler	account
hpc-1	login.hpc-1.example	SLURM	a_myco

A second cluster? Add it here if you submit to more than one – each cluster keeps its own profiles and return path.

Job profiles · hpc-1

which profile each kind of job uses

profile	partition	nodes	gres	cpus	memory	time	array	used for
gpu-single	gpu_short	1	gpu:1	8	32 G	04:00:00	–	Models training · image encoding
gpu-multinode	gpu_long	2	gpu:1 per node	8	32 G	12:00:00	–	check the job can use 2 nodes
cpu-array	cpu	1	–	4	16 G	08:00:00	16	matrix profiles · per-channel stages

gpu-single

guided raw template

guided keeps the script valid

environment setup

module load cuda/12.1 && conda activate cnn

working directory

/scratch/\$USER/cnn

results come back from

/scratch/\$USER/cnn/out

→

./cluster_out

copied into the manifest inbox · Storage

email on finish

```
#!/bin/bash
#SBATCH --account=a_myco --partition=gpu_short --nodes=1
#SBATCH --gres=gpu:1 --cpus-per-task=8 --mem=32G --time=04:00:00
#SBATCH --mail-type=END
module load cuda/12.1 && conda activate cnn
cd /scratch/$USER/cnn
python -m pipeline.run --recipe {{recipe}} --out /scratch/$USER/cnn/out/{{job}}
```

Job status

cluster job status

marked by hand

the site cannot see the queue · the researcher marks submitted, running, finished

remind to check a running job after
