Where things are read from and written to. Bulk arrays live on disk; the database holds paths.

| Roots 212 GB free on this disk |                        |         |             |                                |
|--------------------------------|------------------------|---------|-------------|--------------------------------|
| root                           | path                   | in use  | actions     |                                |
| database                       | ./DATA/pipeline.sqlite | 2.1 GB  | open folder | schema v14                     |
| recordings                     | ./DATA/recordings      | 38 GB   | scan        |                                |
| step cache                     | ./artifacts/steps      | 14.2 GB | clear       | retention in Analysis defaults |
| window matrices                | ./MATRICES             | 21 GB   | scan pull   |                                |
| matrix profiles                | ./PROFILES             | 6.4 GB  | scan pull   |                                |
| models                         | ./MODELS               | 3.8 GB  | scan pull   |                                |
| window sets                    | ./DATA/window_sets     | 1.2 GB  | scan        | 6 saved                        |
| templates                      | in the database        | –       | export all  | 14 saved                       |
| library exports                | ./exports              | 0.4 GB  | open folder |                                |
| manifest inbox                 | ./cluster_out          | 0.2 GB  | import      | watched every 5 min            |

pull copies finished results from the cluster's return path (Compute & HPC) into the root

## Naming convention for files written by stages

tokens

<recording> × <channel> × <fs> × <window> × <stride> × <m> × <hash8> × + token

preview

M2\_aug\_fs1\_CH4\_A2\_1Hz\_600s\_300s\_a7f39c2e.npz

the hash is the recipe prefix, so a file name says which settings made it

Backups the database, settings and hand edits
